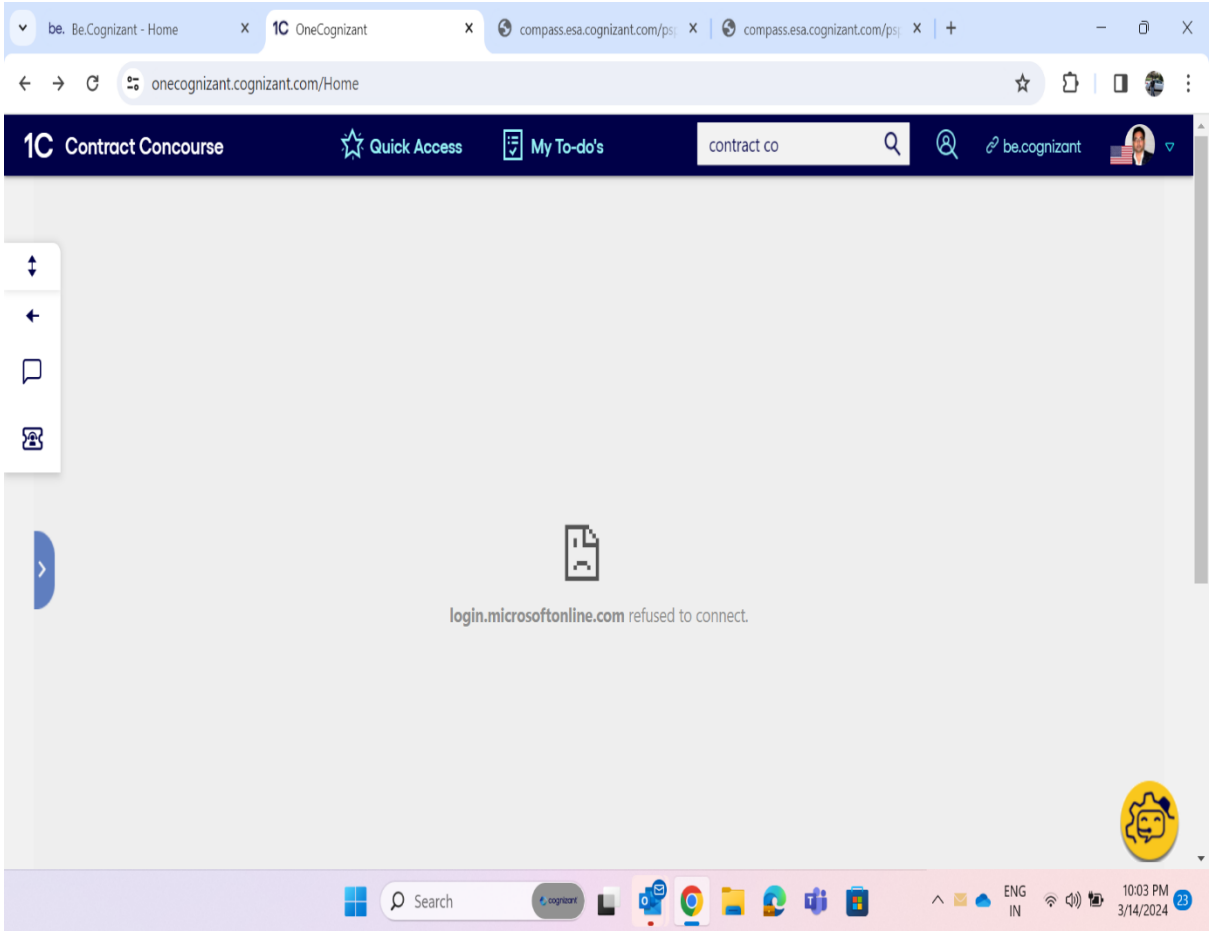
Multiple account issue in iframe with AKS applications

Issue : We are facing issue while accessing AKS applications inside onec iframe with multiple accounts in the browser.

Description:

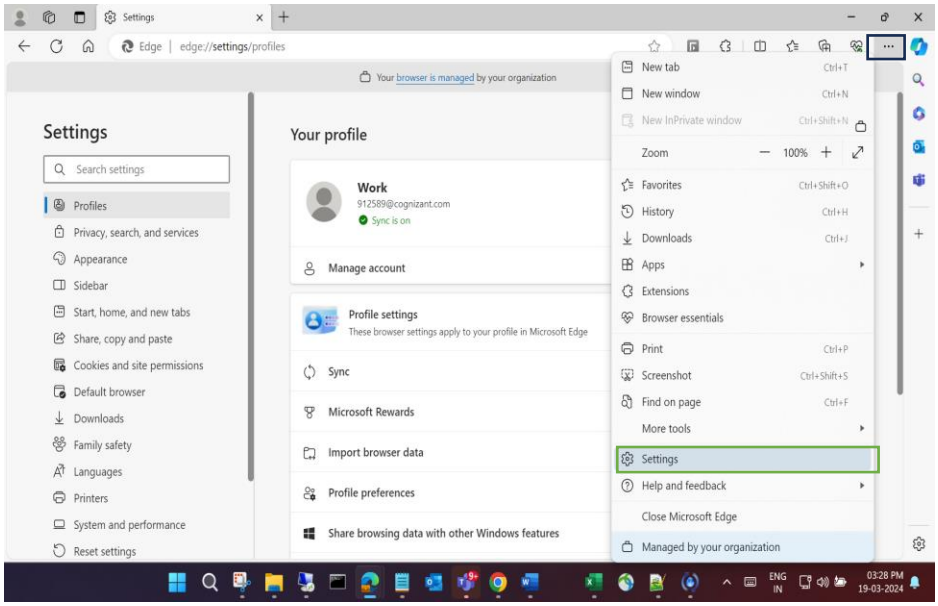
This is because when we do the first login we are able select profile which need to login post that when you open aks based application which is oidc based authentication again go for authentication and when you have multiple profiles will get the issue. This is normal behaviour as we checked with MS.



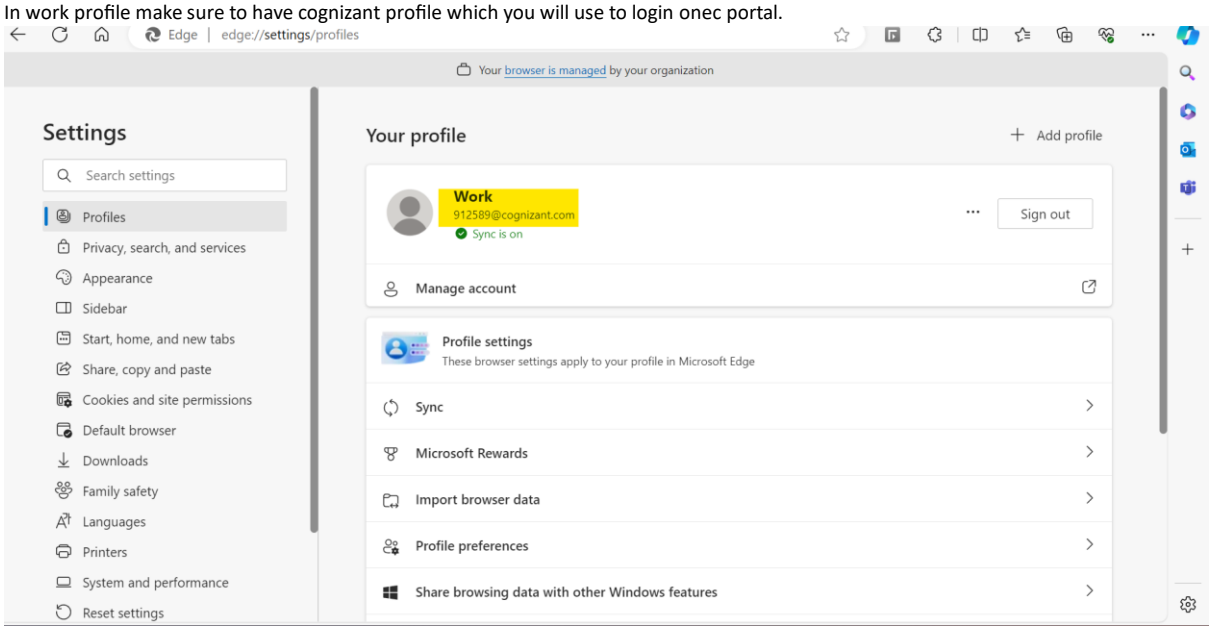
Resolution :

Ways to fix in Edge browser :

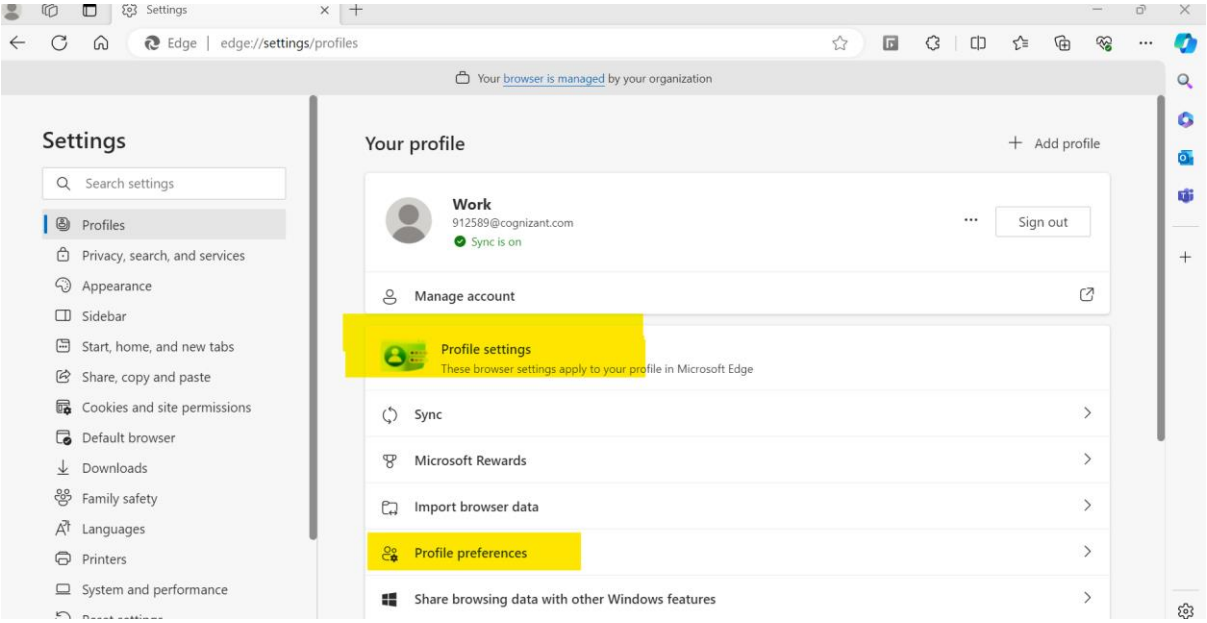
Open Edge browser, open settings by clicking three dots on top right corner.



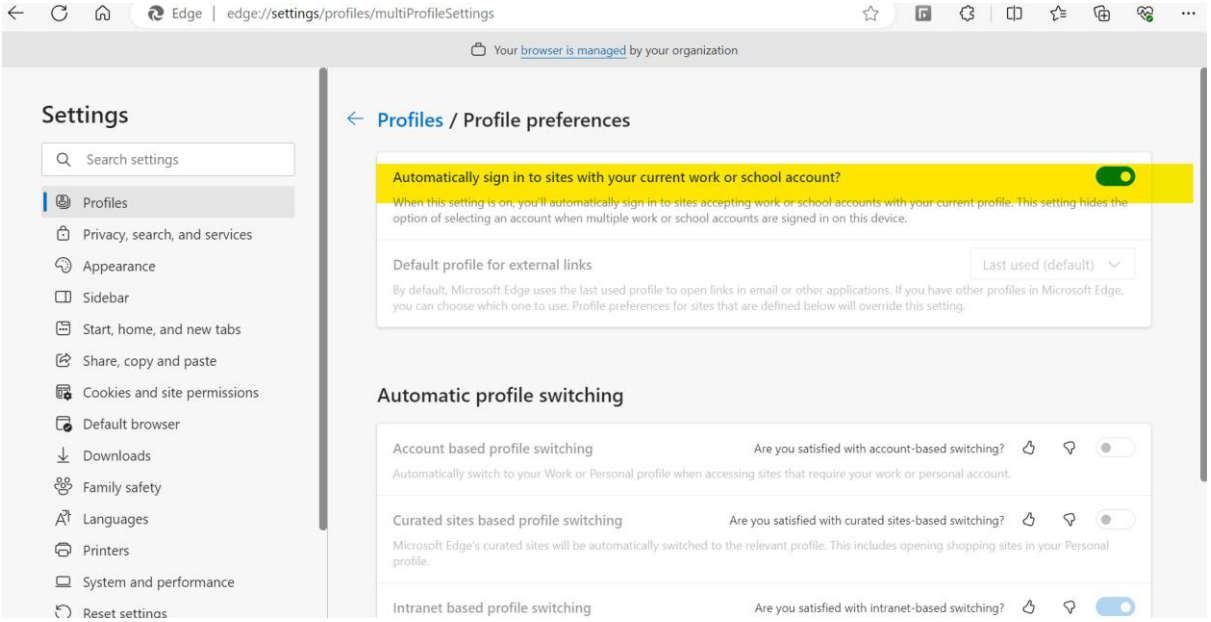
- Click on profile tab from setting on left corner
- In work profile make sure to have cognizant profile which you will use to login onec portal.



- If work profile having different one, please sign-out from that and add your cognizant work profile which you used to login Onec application.
- After adding cognizant profile, click on Profile preferences.



- From profile preferences, enable below setting.
  Automatically sign in to sites with work profile.

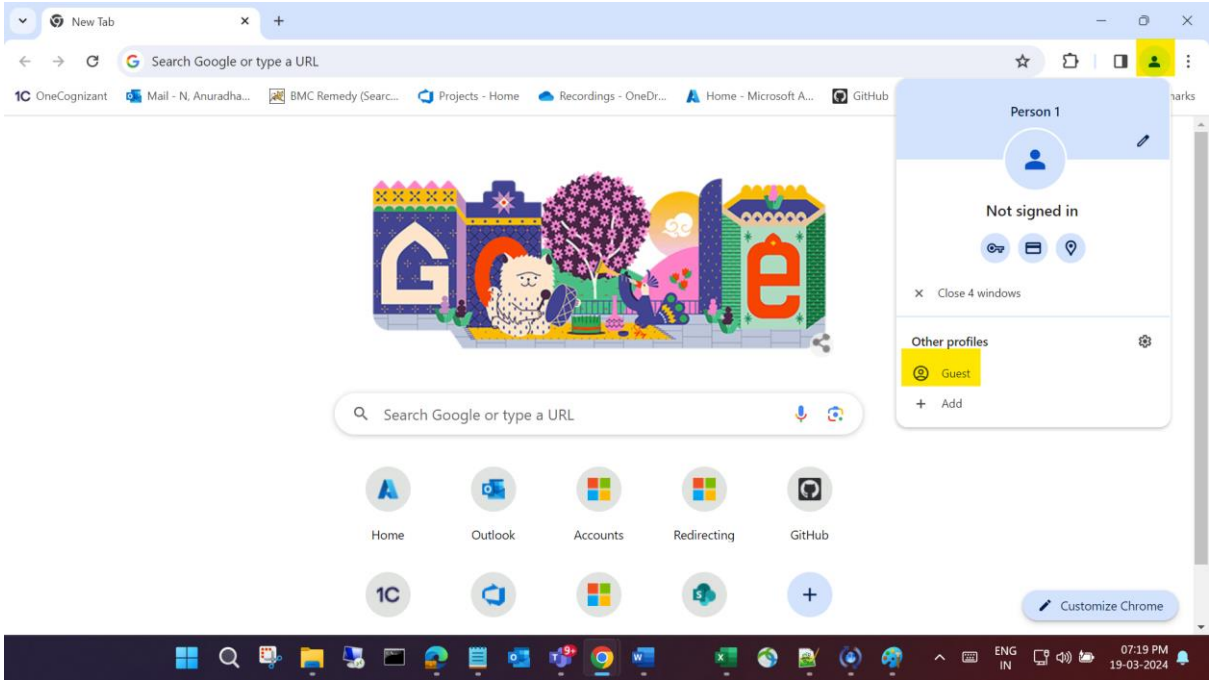


Post that access the application from edge.

Ways to resolve from Chrome browser :

From chrome browser, open a new window and top right corner click on profile icon as highlighted.

And then click on guest from other profile options.



- Open a tab with guest mode and access OneC application to resolve the issue.
