Hi Rasiga,

I've attached all the documents for the Hospital Management System project. This document outlines the functional and non-functional requirements, and it will serve as our primary guide for development.

Please review the document at your earliest convenience.

- **Development Team:** Your feedback on the technical feasibility and any potential roadblocks is crucial. This document will be your blueprint for building the software.
- **Project Manager:** Please review the scope, timeline, and resource requirements to ensure they align with the project plan.
- **Stakeholders:** Please verify that the requirements accurately reflect your vision and business needs. Your approval is essential before we move into the development phase.

I'm available to discuss any questions or concerns you may have after you've had a chance to read through it.

**Regards,**

**Keerthika M N,**
